J. King

Dear Mr Ehleringer

I am writing in response to your letter outlining proposed procedures for fugitive dust sampling. I have no problem with the procedures that you are proposing. There are two additional provisions that should be included in the proposal. I am unable to find any reference in your letter to the duration of the sampling event. You state that you are planning to use a "Hi-Vol sampler" but you do not indicate the duration of the sampling event. When you report the results of the sampling, all sampling parameters should be provided including the volumetric parameters of the sampling device as used and the duration of the sampling period for each sample. The second item that needs to be addressed is the rationale for only one sampling event. There should be provisions that if certain levels of contamination are reached in the first event subsequent events will be scheduled to further evaluate the potential for problems from fugitive dust.

No specific response to this letter is required but upon reporting the results of the sampling, the above issues should be addressed. If you have any questions do not hesitate to contact me. One final bit of internal business, Ron King has accepted another position and is no longer my supervisor. The Agency has undergone a reorganization and I am now in the Missouri/Kansas Branch. Copies of documents and correspondence previously sent to Mr King should be directed to Steve Kovac, Chief of the Missouri/Kansas Branch (MOKS).

Sincerely

Steven E. Kinser
